

# CARMIGNAC PATRIMOINE E EUR ACC

FRENCH MUTUAL FUND (FCP)

Recommended  
minimum investment  
horizon:

5 YEARS

FR0010306142

Monthly Factsheet - 28/02/2025

## INVESTMENT OBJECTIVE

A mixed fund tapping into three performance drivers: international bonds, international equities and currencies. At least 40% of its assets are invested in fixed income products and money market instruments at all times. Its flexible allocation aims to mitigate capital fluctuation while seeking sources of return. The Fund aims to outperform its reference indicator over 3 years.

Fund management analysis can be found on P.3

## PERFORMANCE

Past performance is not necessarily indicative of future performance. Performances are net of fees (excluding possible entrance fees charged by the distributor).

## FUND MANAGEMENT ANALYSIS

### MARKET ENVIRONMENT

- This month has seen an erosion of American exceptionalism.
- Uncertainties surrounding the policies of Trump 2.0 have weighed heavily on the morale of American consumers and businesses, reigniting fears about economic growth.
- Concerns about stagflation and a general lack of clarity have led to a decline in US stocks, while enthusiasm for AI continues to dwindle.
- Due to the lack of visibility in the United States, investors have turned their attention to other parts of the world where valuations remain low.
- European equities have maintained an upward trajectory despite Trump's protectionist threats.
- The positive momentum of Chinese technology stocks has driven the outperformance of emerging markets.
- Across the bond markets, all main segments recorded positive yields for the month, as the decline in US rates had ripple effects on other market segments.
- Lastly, the weakness of the dollar has bolstered emerging market debt.

### PERFORMANCE COMMENTARY

- In this context, the fund recorded a negative performance.
- The selection of stocks, particularly in the technology sector, was the main contributor to this underperformance.
- Persistent concerns about tariffs and the sustainability of earnings for artificial intelligence-focused stocks, such as TSMC and Synopsys, weighed on our results.
- Our diversification strategies, including options on indices, the European automotive and chemical sectors, emerging banks, and the VIX, did not perform as well as expected.
- Conversely, our positioning on US and emerging market rates and credit was beneficial and partially offset the decline in equities.
- Finally, our exposure to the yen and Latin American currencies (MXN, BRL) also had a positive impact.

### OUTLOOK AND INVESTMENT STRATEGY

- The market has revised downwards the growth outlook in the United States due to the threats posed by the Trump administration.
- Given the persistent uncertainties about the evolution of US fiscal and tariff policies, as well as their implications for inflation and growth, we continue to diversify our portfolio.
- Rather than reducing our exposure to equities, which remains at around 40%, we are favouring geographical and sector diversification and the purchase of protection via options.
- The performance of bonds shows that they can once again serve as a diversification against the equity markets, particularly in the United States. As a result, we have increased our modified duration to US rates.
- In Europe, we believe that the consensus is still too pessimistic. We therefore favour the euro over the dollar, maintain a negative modified duration to the euro zone and have increased our exposure to the continent's equities again, and maintain a substantial exposure to credit.

## PORTFOLIO ESG SUMMARY

This financial product is classified as an Article 8 fund under the EU's Sustainable Financial Disclosures Regulation ("SFDR"). The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product are :

- A minimum of 10% of the Fund's net assets are invested in sustainable investments aligned positively with the United Nations Sustainable Development Goals;
- The minimum levels of sustainable investments with environmental and social objectives are respectively 1% and 3% of the Sub-Fund's net assets;
- The equity and corporate bond investment universe is actively reduced by at least 20%;
- ESG analysis applied to at least 90% of issuers.

### ALIGNMENT WITH THE UN SUSTAINABLE DEVELOPMENT GOALS (NET ASSETS)

### United Nations Sustainable Development Goals (SDGs)

SDG alignment is defined for each investment by meeting at least one of the following three thresholds.

1. Company derives at least 50% of its revenue from goods and services that are related to one of the following nine SDGs: (1) No Poverty, (2) No Hunger, (3) Good Health and Well Being, (4) Quality Education, (6) Clean Water, (7) Affordable and Clean Energy, (9) Industry, Innovation and Infrastructure, (11) Sustainable Cities and Communities, (12) Responsible Consumption and Production.
2. Company invests at least 30% of its capital expenditure in business activities that are related to one of the aforementioned nine SDGs.
3. Company achieves aligned status for operational alignment for at least three out of all seventeen of the SDGs and does not achieve misalignment for any SDG. Evidence is provided by the investee company's policies, practices and targets addressing such SDGs.

To find out more about the United Nations Sustainable Development Goals, please visit <https://sdgs.un.org/goals>.

## GLOSSARY

**Alpha:** Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

**Beta:** Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

**Capitalisation:** A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

**Duration:** A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

**FCP:** Fonds commun de placement (French common fund).

**High yield:** A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

**Investment grade:** A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

**Investment/net exposure rate:** The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

**Modified duration:** A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

**Net asset value:** Price of all units (in an FCP) or shares (in a SICAV).

**Rating:** The rating measures the creditworthiness of a borrower (bond issuer).

**Sharpe ratio:** The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

**VaR:** Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

**Volatility:** Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

**Yield to Maturity:** Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM within the portfolio.

## ESG DEFINITIONS & METHODOLOGY

**ESG:** E for Environment, S for Social, G for Governance

**ESG score Calculation:** Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

**Principal Adverse Impacts (PAI):** Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

**SFDR Articles - Fund Classification:** Sustainable Finance Disclosure Regulation, an EU Act that requires asset managers to classify funds into categories: "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective.

**Sustainable Investments:** The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

**Taxonomy Alignment:** In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: [https://ec.europa.eu/info/sites/default/files/business\\_economy\\_euro/banking\\_and\\_finance/documents/sustainable-finance-taxonomy-faq\\_en.pdf](https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf)

(1) of the amount you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge.

(2) We do not charge an exit fee for this product.

(3) of the value of your investment per year. This estimate is based on actual costs over the past year.

(4) of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell.

(5) max. of the outperformance once performance since the start of the year exceeds that of the reference indicator and if no past underperformance still needs to be offset. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

(6) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: [www.carmignac.com](http://www.carmignac.com).

## MAIN RISKS OF THE FUND

**EQUITY:** The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

**INTEREST RATE:** Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CREDIT:** Credit risk is the risk that the issuer may default. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments.

**The Fund presents a risk of loss of capital.**
